Despite very difficult conditions for UCITS funds in July (Barclay UCITS -3.90%), Navigator delivered a very contained 0.53% loss for the month. Commodities, which are strictly speaking not allowed in UCITS funds, continue to be the main differentiator between CTAs and UCITS funds. Navigator, as a pure UCITS fund, doesn't not invest in Commodities.

AH Managed Futures UCITS 0.30, Luxhedge Managed Futures 0.73, Barclays UCITS CTA -3.70, HFRX Systematic Diversified 1.30

Strategy: Navigator was created to achieve significant medium to long-term capital appreciation through investment in Exchange Traded Futures. The fund provides a highly liquid opportunity with low volatility and no correlation to traditional asset classes. The fund delivers uncorrelated returns first by design and second by asset allocation. The fund specialises in the application of completely distinct Technical Analysis methods to cover all market conditions. Each of our three Portfolio Managers is specialised in designing independent profitable models in trend following, mean reverting and pattern testing respectively. Navigators' strategy combines these models to create a robust method that tries to be involved in any identifiable pattern. More so these conditions or patterns can occur several times consecutively or simultaneously. Our strategy creates a global portfolio of fixed income, currency and equity indices.

Andrew J. S. Gebhardt – Managing Partner – Trend Following Strategies

Andrew left the comfort of Civil and Nautical Engineering to trade on the LIFFE floor (Open Outcry) in 1995. By 2001 he started working with Marcello Bugnoli on the implementation of Futures trading systems based on Technical Analysis. From then on, until the creation of Finex in 2010, the models were traded by a number of Tier 1 institutions and today form a key constituent of the UCITS fund portfolio.

Michael Carney – Investment Manager – Mean Reversion Strategies

After a 14yr long institutional career trading for Funds and Banks Mike started trading his own money in 2000. By 2005 he had proven the success of his strategies and created his own fund by raising capital privately. In 2012 he joined Finex, having worked with Andrew in the late 90s. Mike’s models are structurally diverse from the other Fund’s models and balance the portfolio beautifully.

Marcello Bugnoli – Investment Manager – Pattern Testing Strategies

With a background in Aeronautics and Meteorology, Marcello took his experience and entered the financial markets in 2001. He worked closely with Andrew continuously developing totally diverse models in various asset classes. Marcello was instrumental in the implementation of the automated models and remains a crucial element in the continual development of the long term stability of the fund.

Margin To Equity

+ Day Margin: Cumulative total margin of all positions taken during the course of the day without netting. Average Daily Margin is 9.07, maximum is 17.03
 ++Overnight Margin: Cumulative total margin of all positions held overnight without netting positions. Average Overnight Margin is 1.35 while maximum is 5.81.
